Project Name	Import Data using Transform Maps – ServiceNow Employee Data Import
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - <i>who are they?</i>	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the care about - <i>what are they trying to achieve?</i>	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – <i>what bothers them most?</i>	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – <i>what needs to be solved?</i>	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – <i>how does it impact them emotionally?</i>	Describe the emotions the result from experiencing the problems or barriers

Example:

I am a traveler	I'm trying to book flights on my phone	But it takes a long time	Because The website is not responsive and doesn't have a mobile version	Which makes me feel Frustrated
--------------------	---	-----------------------------	--	-----------------------------------

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a ServiceNow administrator who receives bulk employee data from HR as Excel sheets	import the employee data into ServiceNow quickly, accurately and without duplicates	entering records one by one is slow, and re-importing the same or updated sheet creates duplicate or wrong records	there is no staging area, field mapping or unique key (coalesce on Employee ID) controlling how the data is loaded	frustrated and worried about data accuracy
PS-2	an HR manager who needs to track the employee headcount	see how many employees belong to each department and location in one place	the data sits in spreadsheets and ServiceNow tables with no summary view, so it is hard to read and quickly outdated	there are no reports or dashboards built on the employee data	uninformed and unsure whether I can trust the numbers

Problem statements in brief:

PS-1 (Data import): As a ServiceNow administrator, I am trying to import employee data from an Excel sheet, but manual entry and repeated imports create slow, duplicate and inconsistent records, because there is no staging, mapping or coalesce control. This makes me feel frustrated. This problem is solved with Import Sets, a Transform Map and Coalesce on Employee ID.

PS-2 (Insights): As an HR manager, I am trying to see employees by department and location, but the data has no summary view, because no reports or dashboards exist for it. This makes me feel uninformed. This problem is solved with three reports (Employees by Department, Employees by Location, Employee List Report) combined in the Employee Analytics Dashboard.
