

Project Planning Phase

Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)

Date	03 October 2026
Team ID	SWTID-2026-8365
Project Name	Import Data using Transform Maps (Spreadsheet) – ServiceNow
Maximum Marks	5 Marks

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Data Preparation	USN-1	As a user, I can prepare the employee data (Employee ID, Name, Email, Department, Location) in a Google Sheet and download it as Sample Spreadsheet.xlsx.	2	High	
Sprint-1	Table Setup	USN-2	As an admin, I can create the custom table Employee Test (u_employee_test) with five String fields.	2	High	
Sprint-1	Data Import	USN-3	As an admin, I can load the Excel file into the import set table u_employee_import using Load Data.	2	High	
Sprint-1		USN-4	As an admin, I can create a Transform Map and map the source fields to the Employee Test table fields.	3	High	
Sprint-1		USN-5	As an admin, I can run the transform and validate that all 15 records are created in Employee Test.	3	High	
Sprint-2	Duplicate Handling	USN-6	As an admin, I can enable Coalesce on Employee ID so repeated imports update existing records instead of creating duplicates.	3	High	

Velocity:

Total story points = 12 (Sprint-1) + 16 (Sprint-2) = 28 over 2 sprints, so the team's velocity = $28 / 2 = 14$ story points per sprint. With a 6-day sprint, the team's average velocity (AV) per day is:

$$AV = \text{velocity} / \text{sprint duration} = 14 / 6 \approx 2.33 \text{ story points per day}$$

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.
