

Project Design Phase Proposed Solution Template

Date	03 october 2026
Team ID	SWTID-2026-8365
Project Name	Import Data using Transform Maps (Spreadsheet) – ServiceNow
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Organizations receive bulk employee data from external sources in Excel/Google Sheets format. Entering it into ServiceNow manually is slow and error-prone, and re-importing the same file creates duplicate employee records, leaving the employee database inconsistent. HR and admin teams also lack a single view of employee data and import quality.
2.	Idea / Solution description	An automated import pipeline on the ServiceNow platform. The Excel sheet (Employee ID, Name, Email, Department, Location) is loaded into the staging table u_employee_import through Load Data. A Transform Map then maps its fields to the custom target table u_employee_test (Employee Test). Coalesce on Employee ID updates existing records and inserts only new ones, so duplicates are never created. Three reports (Employees by Department – pie, Employees by Location – bar, Employee List – list) are combined in the Employee Analytics Dashboard.
3.	Novelty / Uniqueness	Coalesce on Employee ID makes the import idempotent: re-uploading the same sheet gave 0 inserts, 0 updates and 4 ignored rows, while a changed sheet gave 2 inserts and 2 updates. The solution is entirely low-code (Import Sets, Transform Maps, Reports, Dashboards) with no custom scripting. It combines data loading, validation through transform history, and visual reporting in one workflow.
4.	Social Impact / Customer Satisfaction	Reduces manual data entry and human error for HR and admin teams, so employee records are available faster and stay accurate. Duplicate-free, up-to-date data improves trust in HR information and

		decision-making. The dashboard gives administrators one place to see employee distribution by department and location without manual analysis. It is also a clear, beginner-friendly learning example of the ServiceNow data import process.
5.	Business Model (Revenue Model)	Delivered as an internal ServiceNow solution/service. Possible revenue: (a) one-time implementation and data-migration service charged to client organizations, (b) subscription or annual support for maintaining import maps and dashboards, (c) a reusable import-and-dashboard package or template offered to other ServiceNow customers.
6.	Scalability of the Solution	The same Import Set + Transform Map pattern works for any table (users, assets, incidents, CMDB items) by changing the source file and field maps. It handles larger files and more fields without redesign, and Coalesce keeps repeated or scheduled imports consistent. Data sources can be extended from files to databases or APIs, and the dashboard can be shared with more users, groups and roles as the organization grows.
